## *Welcome to Mack Fanér, your veneer supplier*

Since 1972 Mackfanér's business concept has been to supply veneer. Our objective is to present these products at the highest quality and for the best price available.

## *Quality control from forest to veneer*

With our own experienced staff, the logs are purchased from all around the world. After harvesting they are transported to the veneer mill. At arrival our experts prepare the logs for production in order to get the best utilization of the raw material. The veneer is produced with the most modern and latest veneer technology available.

## *Perception of wood*

Wood is a living material that requires both skill and perception from those working with it. This perception is deep-rooted in the senses of touch and sight, and can only be maintained by great interest and many years of experience. At Mackfanér it is a part of our business

*In order to produce superior quality veneer we use superior logs*

## *Only natural material*

Veneer is a living material originated directly from nature. A material with a given place in nature's regenerative process. As manufacturers of veneer we know that controlled harvesting and reforestation is a necessity. We make the most out of every harvested tree, leaving nothing to waste.
